Abstract of corresponding document: **WO03027564**

The double-skinned tube for the fluid transport of abrasive solids, in particular, of concrete, comprises a hardened inner tube (2), an outer tube (3), made from a steel which can be welded, terminal coupling collars (4), made from a steel which can be welded and a thermal insulation layer (7) between the inner tube (2) and the outer tube (3). The thermal insulation layer (7) can be formed by a coating of a combustible, non-metallic material, such as for example a rust-proofing agent, applied to the external surface (11) of the inner tube (2) and/or the internal surface of the external tube (3).
